**THE MAIN FEATURES OF PHARMACEUTICAL EDUCATION ABROAD**

Yegorkina D.

Scientific supervisor: Kolyada I.V.

National University of Pharmacy, Kharkiv, Ukraine

yegorkina2000@gmail.com

**Introduction.** To begin with, it is essential to specify that a pharmacist is the one, who always spells out the complicated names of drugs correctly, quickly finds the right drug among other similar boxes. A pharmacist is a specialist with a secondary or higher specialized education. Such a specialist should know the Technology of Drug Production, Pharmaceutical Chemistry, Pharmacology, Pharmacotherapy. The pharmacist works in the pharmacy and handles dispensing of drugs and checking prescription. Another line of a pharmacist is working in research institutes and laboratories. Pharmacists are able to work as distributors. They are able to work as representatives of pharmaceutical companies, provide a link between pharmacies and drug manufacturers and very often serve as trade representatives. We have to mention that a profession requires more than just professional skills and also such moral qualities that will help to select the best medicines for the sick that will help everyone to recover as fast as possible. World practice proves that modern pharmacists focus on the client rather than the product. Modern educational agencies offer a wide range of courses on Pharmacy at Universities and colleges in United Kingdom, USA, Canada and other countries. The main condition for admission to pharmaceutical establishments in Europe is full 11 or 13-year education, that was received in general educational schools. Pharmacy abroad is constantly gaining popularity.

**Purpose of the research.** The purpose of research is the education abroad as a chance to acquire a prestigious profession in Ukrainian cities and far outside the country, as an opportunity to receive a high salary and perfect working conditions. The aim is also to improve the skills of staff and bring them to a new professional level through overseas training programmes.

**Materials and methods.** Key points of education were used to realize the objective of the study abroad, its advantages and disadvantages, prospects of employment and duties as an employee of the pharmaceutical industry.

**Obtained results.** We hold the opinion that the pharmaceutical profession requires high moral code, programme responsiveness to clients and advice on all matters related to the treatment and use of medicines. The main place of employment of a pharmacist is a pharmacy in many different country. In addition, in European countries the work in such organizations as research institutes involved in the production of drugs, drug laboratory, pharmacy stores, control and analytical laboratory, pharmaceutical manufacture, pharmaceutical administration, educational institutions, pharmaceutical companies. The responsibilities of a pharmacist are very broad and complex. The pharmacist, who works at the pharmacy, doesn't just dispense medicines. He must also know and be able to explain the scope of a drug, chemical composition, main and side effects, interaction with other drugs and contraindications. As well as, a pharmacist is able to choose qualitative analogues, explain how to take a drug correctly, receive drugs from suppliers, place drugs on display logically. If you would like to study Pharmacy overseas, you must understand that is too hard. As a rule, the obligatory subjects will be Biology, Chemistry, Human Physiology, Pharmacology and Pharmacy. In Germany, Belgium, France and Spain, most of the scientific programmes are directly related to scientific experiments in laboratories and in summer open air. Ukrainian students abroad should accept the fact that training will take 4-7 years. On the one hand, it's very good because the person will be able to develop as much as possible, but on the other hand, study requires a huge amount of time and daily

efforts in learning new terminology. Some universities require students to undergo an additional training program, and after that a selection competition, since there are quite a lot of people who want to become pharmacists abroad. Unlike Ukrainian higher educational institutions specializing in Pharmacy, foreign universities require knowledge of professional English, especially in the USA, Canada, Italy and Switzerland. The biggest drawback is the high cost of training, since this is associated with the spending of universities on the training of highly qualified specialists. And yet this has its great advantage, the money invested in education in the specialty of pharmacy is extremely rarely wasted. The top 10 most prestigious universities where you can get a pharmacist diploma are Ulster University; Cardiff University; University of Bristol; University of Nottingham; Queen's University, Belfast; University of Manchester; Keele University; University of Leicester; University of East Anglia; University College London.

**Conclusions.** Finally, it may be concluded that the profession of a pharmacist is a highly paid specialty that requires enormous responsibility for people's health, a constant desire to improve their knowledge, acquire new skills in communicating with clients, and be able to simplify complex terms. During the coronavirus pandemic, the demand for qualified pharmacists grew by leaps and bounds. In Ukraine and abroad, people very often turn to pharmacists, treat them with the same respect and trust as doctors. And this is not new, because foreign and Ukrainian higher educational institutions are fully ready to train qualified pharmacists, people who are erudite, like no one else, understand different dosage forms and are always ready to advise the appropriate drug depending on the client's situation. Studying abroad has its advantages and disadvantages, as well as studying in any institution in Ukraine. The success of any pharmacist primarily depends not on the educational institution and the country he chose for training, but on the student himself, on his desire and desire to conquer the specialty.

### ENGLISH AS AN INTEGRAL PART OF PHARMACEUTICAL EDUCATION IN UKRAINE

Zhurkina S.V.

National University of Pharmacy, Kharkiv, Ukraine

zhurkinasvetlana337@gmail.com

**Introduction.** Today, English is the language of business, education and travel. In many countries, it occupies a very important place as the language of diplomacy and trade, as about 90% of world agreements are implemented by it. Also, the vast majority of information in various spheres of life, whether science, sports or entertainment is published in English. It is interesting to know that 90% of Internet resources are in English. It seems that learning and knowing the first language of the world is a must for every modern person, but, unfortunately, in Ukraine there are still difficulties with this.

**The purpose of the research** is to find out what advantages a pharmacist with knowledge of English has in contrast to someone who cannot communicate fluently; to trace the opportunities and prospects of those pharmacists who are fluent in the language; to determine what the pharmacist needs to know in order to understand and provide quality service to foreign visitors to health care facilities.

**Materials and methods.** Researches by Yu. Blazhevych, T. Kolomiets, Yu. Suetina, O. Demetska, O. Yerofeeveva on the importance of knowledge of English by pharmacists have been scrutinized. Methods for analyzing data, component analysis method, qualitative analysis methods have been used.
